

Career Objective

To build a career in data science where I can use my statistical knowledge, analytical skills, and creativity to solve real world problems and contribute to meaningful, data-driven decisions. I aim to continuously learn, apply emerging technologies, and grow as a data professional while delivering practical and impactful solution.

Internship Tenhard India Pvt. Ltd, Bengaluru

Dec 2022 – Feb 2023

Intern – Sales & Marketing

- Performed comprehensive market analysis to provide insights that informed strategic decision-making.
- Supported marketing and design activities by creating visually appealing layouts in Canva.

Academic Projects Agentic Mutual Funds Recommendation System

Project using LLM & RAG

- Built an agentic AI-based mutual fund recommendation system using LangGraph for intent-driven, risk aware investment insights.
- Implemented a multi-agent RAG pipeline integrating AMFI, MFAPI, SEBI, and RBI data for factual, explainable recommendations.
- Designed modular Python agents for investor profiling, fund comparison, and transparent decision explanations.

Agentic Inventory Alert Bot Mixing Image Classifier

Project using PIL and NumPy

- Developed an agentic inventory alert system to detect empty retail shelves using image-based comparative analysis and human-in-the-loop validation.
- Implemented step-wise decision logic in Python using PIL and NumPy to avoid false or hallucinated restocking alerts.
- Built and deployed an interactive Streamlit application for adaptive restocking priority and operational decision support.

Car Number Plate Detection

Project using Python, OpenCV, YOLO

- Developed a YOLO-based computer vision system to detect car number plates from images with support for multiple vehicles.
- Implemented real-time inference, bounding box visualization, and plate region cropping using OpenCV and NumPy.
- Built and deployed an interactive Streamlit web application for easy image upload and result visualization.

Credit Score Prediction

Project using Python

- Built an end-to-end credit score classification pipeline with custom feature engineering on 100k+ customer records.
- Generated model explainability insights using key features such as debt-to-income ratio, number of loans, and credit mix to support data-driven credit decisions.
- Tuned and compared multiple models with Optuna, selecting XGBoost/LightGBM as the best-performing ensemble with ~0.82 weighted F1 and ~81.6 percent accuracy on the test set.

Skills

Programming	Soft Skills	Software
• SQL • Python	• Communication • Adaptability • Time Management	• Excel • Power BI • Figma

Certifications

SQL and Relational Databases IBM	Python for Data Science Udemy
Mastering AI and Chatgpt GeeksforGeeks	Microsoft Excel Coursera

Education

Adani Institute of Digital Technology Management PGDM in AI & Data Science	2025 - Present CGPA 2.89/4.33
Mount Carmel College, Autonomous, Bengaluru BSc. Economics & Statistics	2018 – 2022 CGPA 7.5/10.00

Personal Details

Date of Birth - Oct 19, 2005
Languages Known - Hindi, English
Hobbies - Travelling, Reading, Painting
